

COME AND MEET SENSEAR at NSC Congress and Expo 2007

Sensear will be launching and demonstrating its new line communication enabled Hearing protection products at NSC Expo 2007, Chicago held between 15th – 17th October 2007.

This is the first time this unique technology that enables people to wear hearing protection and clearly hear speech in high background noise environments, has been demonstrated in North America.

The Sensear stand is fitted complete with a sound booth which enables you to put the products through their paces with approximately 100 d(B) of industrial background noise.

Try the new products in the Sound Booth. There are ear muff and ear plug variants, with Bluetooth models as well. Speak to your colleagues as if you were on the job, take a mobile phone call from someone outside the sound booth, all whilst leaving your hearing protection on.

Close your eyes and not only hear the alarm, but tell which direction it's coming from.

Please come to Stand 264 and see (“hear”) for yourself.

Distributor enquiries welcome and appointments are encouraged. Please contact us in advance through the “Contact Us” section of this website.

We look forward to seeing you there.

REGARDS
The Sensear Team
